

INSTRUCTIONS FOR INSTALLATION OF THE MODEL

- I. First create a virtual environment by opening up the terminal and entering the following commands;

```
python -m venv venv
```

- II. Then activate the virtual environment through the following commands;

If on windows use; `venv\Scripts\activate`

If on macOS and Linux; `source venv/bin/activate`

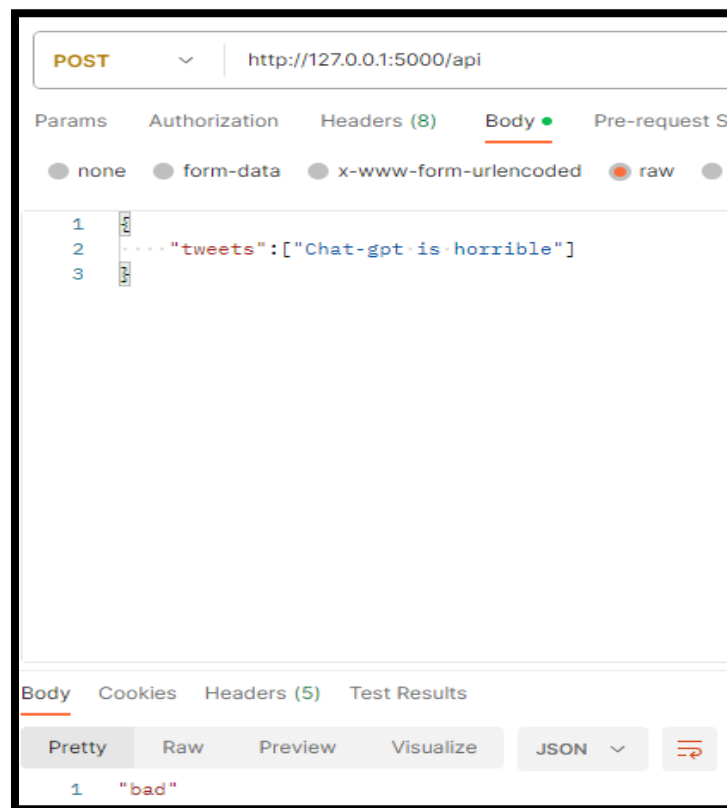

- III. Install the dependencies from the requirements.txt file as follows;

```
pip install -r requirements.txt
```

- IV. Run the REST API file through the following commands;

```
python REST_API.py
```

- V. Then you can test the API via your own choice of platform such as Postman as the following example illustrates using the Postman application;

On top there is the link posted which is the local host/api and on the bottom of the image there is prediction of bad for the above tweet of 'Chat-gpt is horrible'.
